## Subminiature Basic Switch

## Subminiature Basic Switch Offers Long <br> Life of 30,000,000 Operations

- A design that combines simplicity and stability by the use of two split springs ensures a long service life of $30,000,000$ operations.
- A variety of models are available, with operating force ranging from low to high.
■ Solder, quick-connect terminals (\#110) and PCB terminals are available.

■ Approval obtained for standards including UL, CSA, and VDE.

## Ordering Information

## - Model Number Legend

SS= $\frac{\square}{1} \quad \frac{\square}{2} \quad \frac{\square}{3} \quad \frac{\square}{5}$

1. Ratings

10: 10.1 A at 125 VAC
5: 5 A at 125 VAC
01: 0.1 A at 30 VDC
2. Actuator

None: Pin plunger
GL: Hinge lever
GL13: Simulated roller lever
GL2: Hinge roller lever
3. Maximum Operating Force (see note 1)

None: $1.47 \mathrm{~N}\{150 \mathrm{gf}\}$
-F: $\quad 0.49 \mathrm{~N}\{50 \mathrm{gf}\}(0.1 \mathrm{~A}, 5 \mathrm{~A})$
-E: $\quad 0.25 \mathrm{~N}\{25 \mathrm{gf}\}(0.1 \mathrm{~A})$
4. Contact Form

None: SPDT
-2: SPST-NC
-3: SPST-NO
5. Terminals

None: Solder terminals
T: Quick-connect terminals (\#110)
D: PCB terminals (see note 2)

Note: 1. These values are for the pin plunger models.
2. The PCB terminals has a right-angle terminal option. D1: Left-angled terminals
D2: Right-angled terminals
3. When suffix "-T" is placed after the model number, the model withstands high temperatures $\left(-25^{\circ} \mathrm{C}\right.$ to $\left.120^{\circ} \mathrm{C}\right)$.

Note: Consult your OMRON sales representative for details on SPST-NO and SPST-NC models.

## Specifications

## - Ratings

| Model | Item <br> Rated voltage | Resistive load |
| :--- | :--- | :--- |
| SS-10 | 250 VAC | 10.1 A |
| SS-5 | 125 VAC | 5 A |
|  | 250 VAC | 3 A |
| SS-01 | 125 VAC | 0.1 A |
|  | 30 VDC | 0.1 A |

Note: The ratings values apply under the following test conditions:
Ambient temperature: $20 \pm 2^{\circ} \mathrm{C}$
Ambient humidity: $65 \pm 5 \%$
Operating frequency: 30 operations/min

- Switching Capacity per Load (Reference Values)

| Voltage | SS-10, SS-5 |  |  |  |  |  |  |  | SS-01 <br> Non-inductive load <br> Resistive load |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Non-inductive load |  |  |  | Inductive load |  |  |  |  |  |
|  | Resistive load |  | Lamp load |  | Inductive load |  | Motor load |  |  |  |
|  | NC | NO | NC | NO | NC | NO | NC | NO | NC | NO |
| 125 VAC | $\begin{gathered} \hline 5(10.1) \mathrm{A} \\ \text { (see note 1) } \\ 3(10.1) \mathrm{A} \\ \text { (see note 1) } \end{gathered}$ |  | 1.5 A | 0.7 A | 3 A |  | 2.5 A | 1.3 A |  |  |
| 250 VAC |  |  | 1 A | 0.5 A | 2 A |  | 1.5 A | 0.8 A |  |  |
| 8 VDC | $\begin{aligned} & 5(10.1) \text { A } \\ & \text { (see note 1) } \end{aligned}$ |  | 2 A |  | 5 A | 4 A |  |  |  |  |
| 14 VDC | $\begin{aligned} & 5(10.1) \mathrm{A} \\ & \text { (see note 1) } \end{aligned}$ |  | 2 A |  | 4 A | 4 A |  |  |  |  |
| 30 VDC | 4 A |  | 2 A |  | 3 A | 3 A |  |  |  |  |
| 125 VDC | 0.4 A |  | 0.05 A |  | 0.4 A | 0.4 A |  |  |  |  |
| 250 VDC | 0.2 A |  | 0.03 A |  | 0.2 A | 0.2 A |  |  |  |  |

Note: 1. Data in parentheses apply to the SS-10 models only.
2. The above values are for the steady-state current.
3. Inductive load has a power factor of 0.4 min . (AC) and a time constant of 7 ms max. (DC). The inductive load rating of $\mathrm{SS}-10$ is the same as that of SS-5.
4. Lamp load has an inrush current of 10 times the steady-state current.
5. Motor load has an inrush current of 6 times the steady-state current.
6. If the Switch is used in a DC circuit and is subjected to a surge, connect a surge suppressor across the Switch.

## ■ Characteristics

| Operating speed | 0.1 mm to $1 \mathrm{~m} / \mathrm{s}$ (pin plunger models) |
| :---: | :---: |
| Operating frequency | Mechanical: 400 operations/min max. Electrical: 30 operations/min max. |
| Insulation resistance | $100 \mathrm{M} \Omega \mathrm{min}$. (at 500 VDC ) |
| Contact resistance (initial value) | OF $1.47 \mathrm{~N}\{150 \mathrm{gf}\}:$ SS-10, SS-5 models: $30 \mathrm{~m} \Omega \max$. <br>  SS-01 models: $50 \mathrm{~m} \Omega \max$. <br> OF $0.49 \mathrm{~N}\{50 \mathrm{gf}\}:$ SS-5 models: $50 \mathrm{~m} \Omega \max$. <br>  SS-01 models: $100 \mathrm{~m} \Omega$ max. <br> OF 0.25 N $\{25 \mathrm{gf}\}:$ SS-01 models: $150 \mathrm{~m} \Omega$ max. |
| Dielectric strength (see note 2) | 1,000 VAC (600 VAC for SS-01 models), $50 / 60 \mathrm{~Hz}$ for 1 min between terminals of the same polarities $1,500 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ for 1 min between current-carrying metal part and ground, and between each terminal and non-current-carrying metal part |
| Vibration resistance (see note 3) | Malfunction: 10 to 55 Hz , 1.5-mm double amplitude |
| Shock resistance (see note 4) | Destruction: OF $1.47 \mathrm{~N}\{150 \mathrm{gf}\}:$ $1,000 \mathrm{~m} / \mathrm{s}^{2}$ \{approx. 100 G$\}$ max. <br> OF $0.25 \mathrm{~N}\{25 \mathrm{gf}\} / 0.49 \mathrm{~N}\{50 \mathrm{gf}\}:$ $500 \mathrm{~m} / \mathrm{s}^{2}\{$ approx. 50 G$\}$ max. <br> Malfunction: $\operatorname{OF~} 1.47 \mathrm{~N}\{150 \mathrm{gf}\}:$ $300 \mathrm{~m} / \mathrm{s}^{2}$ \{approx. 30G\} max. <br> OF $0.25 \mathrm{~N}\{25 \mathrm{gf}\} / 0.49 \mathrm{~N}\{50 \mathrm{gf}\}:$ $200 \mathrm{~m} / \mathrm{s}^{2}$ \{approx. 20G\} max. |
| Durability (see note 5) | Mechanical: 30,000,000 operations min. (60 operations/min) (Refer to the following Engineering Data.) 10,000,000 operations min. (60 operations/min) for SS-10 models <br> Electrical: 200,000 operations min. (30 operations $/ \mathrm{min}$ ) (Refer to the following Engineering Data.) 50,000 operations $\min$. (30 operations $/ \mathrm{min}$ ) for SS-10 models |
| Degree of protection | IEC IP40 |
| Degree of protection against electrical shock | Class 1 |
| Proof Tracking Index (PTI) | 175 |
| Ambient operating temperature | $-25^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ (at ambient humidity of 60\% max.) (with no icing) |
| Ambient operating humidity | 85\% max. (for $5^{\circ} \mathrm{C}$ to $35^{\circ} \mathrm{C}$ ) |
| Weight | Approx. 1.6 g (pin plunger models) |

Note: 1. The data given above are initial values.
2. The dielectric strength shown in the table indicates a value for models with a Separator.
3. For the pin plunger models, the above values apply for use at both the free position and total travel position. For the lever models, they apply at the total travel position.
4. Lever-type models: Total travel position (with a contact separation time of 1 ms max.)
5. For testing conditions, contact your OMRON sales representative.

## - Approved Standards

Consult your OMRON sales representative for specific models with standard approvals.

Note: The values indicated in parentheses are reference values for cases when the installation direction is such that the lever weight is not applied to the plunger.

## Precautions

Refer to pages 26 to 31 for common precautions.

## $\square$ Cautions

## Terminal Connection

When soldering the lead wire to the terminal, first insert the lead wire conductor through the terminal hole and then conduct soldering.
Make sure that the capacity of the soldering iron is 60 W maximum. Do not take more than 5 s to solder the switch terminal. Improper soldering involving an excessively high temperature or excessive soldering time may deteriorate the characteristics of the Switch.
Be sure to apply only the minimum required amount of flux. The Switch may have contact failures if flux intrudes into the interior of the Switch.
Use the following lead wires to connect to the solder terminals.

| Model | Conductor size |
| :--- | :--- |
| SS-5 | 0.5 to $0.75 \mathrm{~mm}^{2}$ |
| SS-10 | $0.75 \mathrm{~mm}^{2}$ |

If the PCB terminal models are soldered in the solder bath, flux will permeate inside the Switch and cause contact failure. Therefore, manually solder the PCB terminal.
Wire the quick-connect terminals (\#110) with receptacles. Insert the terminals straight into the receptacles. Do not impose excessive force on the terminal in the horizontal direction, otherwise the terminal may be deformed or the housing may be damaged.

## Insulation Distance

According to EN61058-1, the minimum insulation thickness for this Switch should be 1.1 mm and minimum clearance distance between the terminal and mounting plate should be 1.6 mm . If the insulation distance cannot be provided in the product incorporating the Switch, either use a Switch with insulation barrier or use a Separator to ensure sufficient insulation distance. Refer to Separator on page 152.

## ■ Correct Use

## Mounting

Turn OFF the power supply before mounting or removing the Switch, wiring, or performing maintenance or inspection. Failure to do so may result in electric shock or burning.
Use M2.3 mounting screws with plane washers or spring washers to securely mount the Switch. Tighten the screws to a torque of 0.23 to $0.26 \mathrm{~N} \cdot \mathrm{~m}\{2.3$ to $2.7 \mathrm{kgf} \cdot \mathrm{cm}\}$.
Mount the Switch onto a flat surface. Mounting on an uneven surface may cause deformation of the Switch, resulting in faulty operation or breakage in the housing.

## Operating Stroke Setting

Take particular care in setting the operating stroke for the pin plunger models. Make sure that the operating stroke is $70 \%$ to $100 \%$ of the rated OT distance. Do not operate the actuator exceeding the OT distance, otherwise the durability of the Switch may be shortened.

## Using Micro Loads

Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. Use models that operate in the following range. However, even when using micro load models within the operating range shown below, if inrush current occurs when the contact is opened or closed, it may increase contact wear and so decrease durability. Therefore, insert a contact protection circuit where necessary.
The minimum applicable load is the N -level reference value. This value indicates the malfunction reference level for the reliability level of $60 \%$ ( $\lambda 60$ ). The equation, $\lambda 60=0.5 \times 10^{-6} /$ operations indicates that the estimated malfunction rate is less than $1 / 2,000,000$ operations with a reliability level of $60 \%$.

- Separators

| Applicable <br> Switch | Thickness (mm) | Model (see note) |
| :--- | :--- | :--- |
| SS, D2S, D2SW | 0.18 | Separator for SS0.18 |
|  | 0.4 | Separator for SS0.4 |

Separator for SS $\square$

Note: The material is EAVTC (Epoxide Alkyd Varnished Tetron Cloth) and its heat-resisting temperature is $130^{\circ} \mathrm{C}$.

## Connector

Refer to Terminal Connectors on page 282.
